ADMIN CONSOLE · CROSS-BROWSER MOBILE QA

Digital Platform — QA Checklist

Use this checklist to verify the admin experience across Chrome, Edge, Safari, and Firefox on Android and iPhone. Tick each item after confirming on a real device or emulator.

TEST ENVIRONMENT

0. Environment under test

Record the exact environment used for this pass before running any checks. Re-file the checklist whenever the build, flags, endpoints, or network change.

Field	Value
Build version / commit SHA	
Release channel	■ Preview ■ Production ■ Local dev
Deployment URL	
Backend / API base URL	
Storage / CDN base URL	
Realtime endpoint	
Auth provider endpoint	
Database region	
Test date & tester	

Feature flags & toggles (record ON/OFF for this run)

Flag / setting	State	Notes
Site status (Online / Offline)		
Multi-admin approval required	■ ON ■ OFF	
Realtime notifications	■ ON ■ OFF	
Proof watermarking	■ ON ■ OFF	
Maintenance banner	■ ON ■ OFF	
Other flag: _____	■ ON ■ OFF	

Network profile

Condition	Tested	Observed latency / notes
Wi-Fi (fast, low-latency)	■	
4G / LTE (real device)	■	
3G throttled (DevTools Slow 3G)	■	
Offline (airplane mode)	■	
Flaky / packet loss (throttled)	■	
VPN / proxy	■	

COVERAGE MATRIX

Browsers, devices & responsive breakpoints

Run every section of this checklist on each cell below. Tick a cell only after a full pass on that browser at that breakpoint. Rotate portrait/landscape where the device supports it.

Browser / Device	Mobile 320–480	Large mobile 481–640	Tablet 641–1024	Desktop 1025–1440	Wide 1441+
iOS Safari (iPhone SE / 13 / 15 Pro)	■	■	–	–	–
iOS Safari (iPad, portrait & landscape)	–	–	■	–	–
Android Chrome (Pixel / mid-range)	■	■	–	–	–
Android Chrome (tablet)	–	–	■	–	–
Samsung Internet (Galaxy S / A series)	■	■	–	–	–
Samsung Internet (Galaxy Tab)	–	–	■	–	–
Desktop Chrome / Edge (Windows, macOS)	–	–	■	■	■
Desktop Safari (macOS)	–	–	■	■	■
Desktop Firefox (Windows, macOS)	–	–	■	■	■

Widths are CSS pixels. – = not applicable for that form factor. Test both orientations on tablets and phones ≥97 mm wide.

SIGN IN

1. Auth & Access

- ■ Sign in works on Chrome, Edge, Safari, and Firefox (Android + iPhone).
- ■ iOS Safari does not zoom on focus of email/password inputs.
- ■ Offline banner appears when connection is lost; sign-in retry surfaces a clear error.
- ■ "Claim Admin" bootstrap is disabled after the first admin exists.

RESPONSIVE SHELL

2. Layout & Navigation

- ■ Mobile drawer opens/closes with a 48×48 px trigger; overlay dismisses on tap.
- ■ No horizontal scrolling in dashboard, settings, or proof manager at 320 px width.
- ■ Header notification bell is reachable with one hand on 6" devices.

CONTENT ADMIN

3. Spreadsheet Settings

- ■ Current spreadsheet URL is visible and editable.
- ■ Empty or non-spreadsheet URLs are rejected with an inline error before save.
- ■ Save shows success toast; error state offers retry with exponential backoff.
- ■ Offline save is queued/blocked with a clear message.

ONLINE/OFFLINE

4. Website Status

- ■ Toggling to Offline swaps the customer site to the maintenance page within one refresh.
- ■ Admins remain able to browse the site while offline.
- ■ /admin routes are always reachable regardless of site status.

CONTENT OPS

5. Proof Gallery Manager

- ■ Upload accepts JPG, PNG, WEBP, GIF, BMP, HEIC/HEIF; rejects other MIME types.
- ■ Files >15 MB are rejected before upload begins.
- ■ Replace image swaps the asset without page refresh.
- ■ Delete opens the AlertDialog; Cancel keeps the row intact.
- ■ Search and date-range filters combine correctly; Clear resets both.
- ■ Published/Hidden toggle is reflected on the customer gallery within one refresh.

REAL-TIME

6. Notifications

- ■ Bell badge increments on new upload / publish / hide events.
- ■ New/updated published proofs appear on the public gallery without refresh (realtime).
- ■ Mark all read and Clear all work and persist across reload.

CUSTOMER VIEW

7. Public Proof Gallery

- ■ 2 / 3 / 4-column grid at mobile / tablet / desktop breakpoints.
- ■ Lightbox opens with fade, supports swipe and arrow-key navigation.
- ■ Right-click, drag, and long-press save are blocked on images.

■ Images blur when the tab loses focus and restore on return.

ROLE-BASED ACCESS

8. Admin, Editor, and Viewer Permissions

Verify each role behaves exactly as expected on mobile browsers (Chrome, Edge, Safari, Firefox — Android + iPhone). Use three separate test accounts, one per role, and repeat every scenario on each browser.

Capability matrix

Capability	Admin	Editor	Viewer
Access /admin dashboard	yes	yes	no
Toggle site online/offline	yes	no	no
Update spreadsheet URL	yes	no	no
Upload / replace proofs	yes	yes	no
Edit proof title & description	yes	yes	no
Publish / hide proofs	yes	yes	no
Delete proofs	yes	no	no
View admin notifications	yes	yes	no
Manage user roles	yes	no	no
View public proof gallery	yes	yes	yes

Admin — full control

- ■ Signs in on all four mobile browsers; lands on /admin dashboard without errors.
- ■ Sees Spreadsheet Settings, Website Status, Proof Manager, and Notifications.
- ■ Can toggle site Online/Offline and confirm maintenance page swap on a second device.
- ■ Can upload, replace, edit, publish/hide, and delete proofs; delete dialog appears.
- ■ Can promote/demote other users; role change reflects on next sign-in.
- ■ Notification bell shows real-time events from actions by editors.

Editor — content only

- ■ Signs in successfully and reaches /admin dashboard.
- ■ Spreadsheet URL field and Website Status toggle are hidden OR disabled.
- ■ Can upload, replace, edit, and publish/hide proofs.
- ■ Delete button is hidden OR disabled; direct API delete is rejected server-side.
- ■ Cannot access the roles management screen.
- ■ Notification bell shows proof events but not role/setting change events.

Viewer — read-only

- ■ Visiting /admin redirects away OR shows a "View only" state.
- ■ All write actions are hidden — no disabled admin buttons leak in the DOM.
- ■ Direct navigation to /admin/proofs, /admin/settings is blocked with a friendly message.
- ■ Mutating API calls via devtools return 403 / RLS denial — nothing is written.
- ■ Session persists across app relaunch on iOS Safari and Android Chrome.

Cross-cutting checks (run for every role)

- ■ Role changes take effect within one refresh; no stale UI on iOS Safari bfcache.
- ■ Offline banner behavior is identical across roles.
- ■ Deep links to gated routes always land on the correct redirect (never blank).
- ■ No role information is exposed in client bundles beyond what the user needs.
- ■ Sign-out from any role clears cached queries and cannot be restored with back.
